

Pad Printing Clean Up procedure

To clean up your pad printer you will need the following items

At least 16oz. SC19 ink cleaner
1 gallon plastic pale or equivalent
1- ½ wide inexpensive paint brush
paper towels
trash can lined with a plastic bag.
Plastic milk jug or equivalent
Plastic gloves

Take the plastic jug and cut the top off.
Turn the top upside down and place it in the bottom
and staple it in place.

Pour the pad cleaner in the plastic pale (not the jug)
Using two pales with ½ gallon cleaner works best

Take the ink cup and the plate out of the machine.
Turn the plate and cup upside down(so the ink will stay in the cup.)
Put on gloves if you have not done so already.
Pull the plate off of the cup.
Put the cup upside down in the milk jug top to drain.
Wipe ink off of he plate with the paper towels and clean off with the SC19
After the cup has drained awhile
Wipe the cup out with the paper towel as best as you can.
Place the cup in the SC19 and clean out with the brush.
This is where it is best to have two pales with cleaner
because you can put the cup in the second pale to clean it farther
Remove the thinner cap and clean out the threads.
Remove the cup and wipe dry.
